

SMARTORDER-AI PROJECT OVERVIEW

Project Title: SmartOrder-AI – Intelligent E-Commerce Platform with AI-Driven Purchase Behavior Analytics

SmartOrder-AI is a modern full-stack web application that integrates Artificial Intelligence with e-commerce to analyze customer behavior and classify purchases as Rational or Impulse. The system tracks user actions such as time spent, interaction speed, scroll behavior, and cart activity to generate an AI Decision Score.

Objectives:

- Seamless shopping experience
- Real-time behavior tracking
- Admin dashboard with analytics
- Data-driven decision support

Scope & Features:

User login, product browsing, cart, checkout, order tracking, feedback. AI module records behavior and classifies decisions. Admin panel manages products, orders, payments, users, and analytics.

Technology Stack:

React.js, Tailwind CSS, HTML, CSS, JavaScript, Node.js, Express.js, MongoDB

Development Approach:

Spiral Model under SDLC (Planning → Design → Development → Testing → Deployment)

Benefits:

- Better user experience
- Business analytics insights
- Scalable and secure system

Expected Outcome:

AI-based intelligent e-commerce system with future scalability.
